

Construction Notification - Transmission line stringing across roads

February 2025

Elecnor Australia has been contracted by Transgrid to deliver part of EnergyConnect with the construction of 700km of new power lines from the SA border to the regional energy hub of Wagga Wagga. The project will connect the electrical grids of New South Wales, South Australia, and Victoria, improving reliability of our nation's energy supply.

Construction activities

The EnergyConnect project team are continuing to advance construction activities on the transmission line from Buronga, NSW to Dinawan, near Bundure. This transmission line consists of 800 towers stretching over 376km.

The approved hours of works are:

- 7am to 6pm Monday to Friday
- 8am to 1pm Saturdays
- At no time on Sundays and NSW Public Holidays.

Transmission line stringing across roads

Elecnor Australia will be stringing transmission lines across a number of roads in the Balranald Local Government Area (LGA) during March 2025 as part of this construction activity.

Locations impacted by this stringing activity are as follows:

- **Sturt Highway**
Approximately 22km west of Balranald
- **Yanga Way**
Approximately 15km south of Balranald, near substation
- **Windomal Road**
Approximately 15km south-west of Balranald

Work outside of approved construction hours

This activity is part of approved out of hours construction work to ensure works are carried out safely and to minimise disruption to the community.

Stringing works across these roadways will take place, weather permitting, Monday to Sunday 7am to 7pm (including Public Holidays).

The work will commence in early March 2025 and are scheduled to be completed late March 2025.

All work will be carried out in line with the project's Conditions of Approval and Construction Environmental Plan.

How could this affect you?

There will be an increased number of construction vehicles, plant and machinery operating in the area of the works and travelling to and from these sites. Temporary traffic changes will be in place to ensure the work zone is safe. Road users should factor this in when planning their journeys and allow for delays.

How we're managing impacts

Traffic management

There will be traffic control in place at the affected locations while works are being carried out to ensure the safety of motorists and construction crews.

Please keep to the sign posted speed limits, follow the direction of traffic controllers, and drive to the conditions.

Site light, noise and vibration

The type of plant and equipment you can expect to see as part of the stringing works include steel cables, draw wire, conductor wire, insulators, elevated work platforms, rough terrain cranes, telehandlers, trucks and light vehicles.

Machinery and equipment will generate some light, noise and vibration. We will make every effort to minimise impacts by:

- Minimising the number of machines/vehicles to be used
- Ensuring all machinery and vehicles are maintained and serviced
- Turning off machinery and vehicles when not in use
- Fitting equipment with devices to minimise noise
- Monitoring dust, noise and vibration to manage any potential impacts and change our work if required.

Contact Us

Please contact us if you have any questions about the stringing works or if you have any questions about the project. We can be contacted via:
